P-Range Shelter

P-Range shelter: an all-curved textile architecture

Designed for a **permanent** or **semi-permanent** installation, our P-Range modular shelters can be anchored to a levelled concrete platform or self-ballasted through steel/concrete blocks or water tanks. These structures can be equipped with a **constant humidity control system** to minimize the aging process of the sheltered material whilst reducing electricity consumption. This system is complemented by the use of a special PVC coated, fire-retardant fabric (1050 g/m²) that is high-frequency welded together for optimal waterproofing. Access is made possible through 1 or 2 fully opening gables or via roll-up doors (4.50 m x 4.50 m). These shelters can be packed in 20' containers or on aircraft pallets. Worldwide service and assistance are provided by our specialized technicians.

Available equipment:

- Dehumidifier
- Heating
- Air conditioning
- Lighting
- Ventilation
- Exhaust gas extraction
- CO and NO₂ detection
- Cranes with overhead hoists (800 or 1000 daN).

Load resistance:

- Wind: 180 km/h
- Snow : 100 daN/m²

Fields of use:

- Shelter
- Dry air storage
- Maintenance
- Warehouses for sensitive equipment or vehicles (planes, helicopters, motor vehicles, spare parts...)
- Military operations

Colours:

- Sand
- White
- NATO Green

- **Resistance of materials** to extreme weather conditions and **sustainability of the unit**.
- Great **modularity** / High **adaptability**.
- **Attractive design**.
- Quick and **easy assembly**.
- Installation on a levelled platform, without specific preparation of the ground.
- **Optimized packing** into ISO 20' containers.

P-Range Shelter

The below values may vary according to door, length and equipment options.

	P13	P16	P20	P20 R	P24 R
Type	half - barrel	half - barrel	half - barrel	2 slopes	2 slopes
